REAL-TIME MONITORING SOLUTION

MA Series Dual-Wave Probe

Real Tech's robust MA series submersible probe provides affordable real-time measurement of organic matter in water or wastewater. Designed to meet the needs of many monitoring applications, the series offers multiple sensor path length selections for the desired measurement range.

Controllers and Accessories

Our innovative modular product platform allows a system to be configured around the ideal sensor with controller options and various accessory products, including compressed air cleaning systems that lower maintenance while improving system performance, and mounting kits for simple installation and operation. We can truly meet the physical demands of any installation to ensure reliable, continuous operation.

Real-time Actionable Data

With the right sensor and hardware configuration, we then build a custom calibration to monitor the aggregate organics parameter(s) or compounds of interest in real-time, accurately and reliably.

MEASUREMENT PRINCIPLE

The MA sensor utilizes light at 254 and 550 nm wavelengths. Many organic compounds, specifically aromatic organics, absorb light at 254 nm while interfering compounds are compensated for at 550 nm. Benefiting from Real Tech's innovative LED technology, accurate and stable measurements are obtained overtime with minimal maintenance or operator intervention. MA series probe parameters include TOC, DOC, UV254, UVT, TSS and colour.
